

SKI BAG MOUNTAIN RESCUE

The **ski bag mountain rescue** was designed for transporting **skis and poles** in the emergency vehicle or in the helicopter, the outer holding loops are used for transport by means of a rope. **It offers enough space for 4 pairs of skis and poles.**

The **compact and robust ski bag** prevents the skis from getting stuck in the interior of a vehicle/helicopter. Attached to the vehicle roof by means of suitable ski carriers, it protects the skis from road salt and grit.

The outer **straps and buckles** are made of **very robust** and durable metal, which allows the ski bag to be tied down to a minimum depending on the contents. Several carrying handles facilitate the loading/unloading of the vehicle. The use of **tarpaulin fabric** means that the ski bag is immediately ready for use again after a short cleaning.
