

Helicopter Rescue Bag TYROMONT - Mod. CHRISTOPHORUS EVO

HEMS (=Helicopter Emergency Medical System) carrying bag for the horizontal transport of injured persons.

Protective bag to fully enclose the patient, manufactured from high-strength, water- and wind resistant perlon PES fibre.

Bottom with sewn diagonal-**belt weight bearing system** made from rotting-free, high strength 45mm PES belt provides even weight distribution for perfectly horizontal bedding of the injured.

Reinforced **Cordura fibre bottom** with **spike-strips** on the underside.

Bracing battens for the **stiffing of the head/shoulder area**. Integrated **carrying loops** for lifting the patient and attachment of the suspension.

Stow-away side-pouches over the entire length for the complete storage of the suspension.

Longitudinal large-area Velcro closing for the perfect adoption to the size of the injured. Four additional external **fixation belts** which can be stored away in small pouches.

Head opening with additional **padding**, geared up for the optional application of the face protection shield (93281).

Storage bag for vacuum pump and neck-immobilization, equipped on top with Velcro fastener for optional application of the RBS Rotation Brake System (93285).

Suspension: 10 high strength fibre suspension ropes / five of each side pooled in one Maillon Rapide Delta-link carabiner.
